

Eberspächer Climate Control System

User Instructions

This vehicle is equipped with a fully automatic climate controller that maintains the user selected interior temperature using a digital keypad. This system controls both the independent water heating and air conditioning functions of this vehicle.

Economy Mode

The climate control system should normally be operated in an ECON mode by depressing the **AUTO** key followed by the  Key. This will turn off the compressor and the corresponding LED.

In this mode the controller maintains the temperature by controlling the hot water heating circuit only. Fuel savings and a possible increase in available engine power are possible in this operating mode.

Switching the Auto System ON

The AUTO system is turned on by pressing the **AUTO** key. In automatic mode the system will monitor the temperature inside the vehicle, adjusting it as required to maintain the pre-selected temperature.

Changing the selected Temperature

The temperature can be adjusted by depressing the  or  keys on the left side of the panel. The temperature is selectable between 18 and 30°C or can provide maximum heating (displays HI) or maximum cooling (displays LO).

Adjusting the Blower Speeds

The blowers have three speeds and are normally controlled by the climate controller. They can be adjusted manually by depressing the right hand \triangle or ∇ keys. The current blower speed is displayed on the control panel and is indicated by the LO, MED or HI LED illuminating.

Checking the Outside Air Temperature

The outside air temperature can be displayed for six seconds by momentarily pressing the  key. In ambient temperatures lower than 4°C, the display panel will blink automatically providing the outside air temperature to warn of the possibility of ice.

Switching the System Off

The climate control system can be switched off by depressing the OFF key.
